FILBERTS

Guaranteed non-sprouting (Grafted on a TRUE TREE FORM Filbert Root stock, known as the Turkish Filbert.)

Barcelona, Duchilla, Daviana, Clackamas, Brixnut and W. Avalon.

	Each	10	100
No. 1 Plants	\$1.00	\$8.00	\$60.00

This NON-SPROUTING FILBERT is the greatest step in advancement known along the lines of Filbert culture. Having observed the Turkish Trees for 12 years, and standard sorts being grafted to the Trees, we feel safe in offering this non-sprouting stock to the Planter. They have been Prolific Producers of well filled nuts where top grafted to standard sorts. Weights, etc. given on request. Some Nut Culturists still insist that BUSH FORM FILBERTS can be grown in Nursery form and be made to produce non-sprouting Trees. This is positively against the LAWS of NATURE.

The Filbert trees grown on the TURKISH STOCK are very rapid growers and should be planted a good distance apart. The stock has shown to be blight resistant, which is a vital factor in Filbert Culture. This root stock develops a Tap and Lateral roots like real Trees should. An orchard planted with this NON-SPROUTING stock will be a pleasure to grow, as well as being a PROFIT PRODUCER at an early age. Nuts were born on grafts put in last spring, proving them to be early Producers. At four years these trees will be classed as "commercial". At six years will be one of the most profitable orchards found for its age. Filberts are money-makers often Producing \$250.00 to \$400.00 per acre when full grown. Write for further information concerning this Non-Sprouting Type. Available supply is limited.
